<p>Notes: Data drawn from the 2006-2016 Current Population Survey Voter Registration Supplement. All models run as linear probability models on the vote eligible population (age 18+, citizens), using CPS sample weights. Standard errors in parentheses and clustered at the state-level. All specifications include controls for respondent's age (3 groups, age 18-39, age 40-49, age 50-64), marital status, sex, educational attainment, race (white, African-American/black, Hispanic/Latino), employment status, income category (16 groups), and whether the respondent self-reported voting status. All specifications include year fixed effects, area fixed effects, local unemployment rate, partisanship and competitiveness. Columns (2) and (4) include political variables, controlling for voter identification laws, early voting laws, and automatic registration (and varying at the state-year level). Sample restricted to non-elderly adults. Pre-treatment uninsured rate, obtained from the SAHIE for 2013, is defined for relevant age group (18-64, 18-39, 40-49, and 50-64) at the local level. *** indicates p<0.01, ** indicates p<0.05, * indicates p<0.10</p>

Notes: Data drawn from the 2006-2016 Current Population Survey Voter Registration Supplement. All models run as linear probability models on the vote eligible population (age 18+, citizens), using sample weights modified in accordance with Hur and Achen (2013) in columns (1) and (2), and using CPS sample weights in columns (3) and (4). Standard errors in parentheses and clustered at the state-level. All specifications include controls for respondent's age (3 groups, age 18-39, age 40-49, age 50-64), marital status, sex, educational attainment, race (white, African-American/black, Hispanic/Latino), employment status, income category (16 groups), and whether the respondent self-reported voting status. All specifications include year fixed effects, area fixed effects, local unemployment rate, partisanship and competitiveness and political variables, controlling for voter identification laws, early voting laws, and automatic registration. Sample restricted to non-elderly adults. *** indicates p<0.01, ** indicates p<0.05, * indicates p<0.10

Notes: Data drawn from the 2006-2016 Current Population Survey Voter Registration Supplement. All models run as linear probability models on the vote eligible population (age 18+, citizens), using Hur-Achen weights in columns (1) and (2) and CPS sample weights in columns (3) and (4). Standard errors in parentheses and clustered at the state-level. All specifications include controls for respondent's age (3 groups, age 18-39, age 40-49, age 50-64), marital status, sex, educational attainment, race (white, African-American/black, Hispanic/Latino), employment status, income category (16 groups), and whether the respondent self-reported voting status. All specifications include year fixed effects, area fixed effects, local unemployment rate, partisanship and competitiveness, and also include political variables, controlling for voter identification laws, early voting laws, and automatic registration (and varying at the state-year level). Sample restricted to non-elderly adults. Pre-treatment uninsured rate, obtained from the SAHIE for 2010, is defined for relevant age group (18-64, 18-39, 40-49, 50-64) at the local level. *** indicates $p < 0.01$, ** indicates $p < 0.05$, * indicates $p < 0.10$
